

IDX Supercomputer Dashboard

Documentation Guide

Indonesian Stock Exchange Analytics Terminal

Version 2.0 — March 2026

This document explains every section, metric, and data point displayed on the IDX Supercomputer Dashboard. It is written for readers who may not have a background in stock trading or financial markets. Each term is defined in plain language so anyone can understand the information presented.

 - 3.6 Supply Chain Tab
 - 3.7 Informal Economy Tab
4. Stock Detail Modal
5. Data Sources and References
6. Glossary

1. Overview

The IDX Supercomputer Dashboard is a web-based analytics terminal that displays data about stocks listed on the Indonesia Stock Exchange (IDX), also known as Bursa Efek Indonesia (BEI). It is inspired by professional platforms like the Bloomberg Terminal, Stockbit, and Ajaib.

The dashboard is divided into seven main tabs: Overview, Rankings, Screener, News, Koneksi & Kultur Intelligence, Supply Chain, and Informal Economy. Each tab presents a different angle of the Indonesian stock market.

Data is sourced from the official IDX Daily Stock Summary files (published at idxdata3.co.id) whenever available. When the official source is temporarily unreachable, the dashboard shows the last successfully fetched official snapshot or a locally generated bootstrap dataset, clearly labelled as such.

2. Key Concepts and Terminology

Before exploring the dashboard sections, here are the essential terms used throughout the application. These are specific to the Indonesian stock market and may differ from terms used in other countries.

Term	Definition
IHSG / JCI	The Jakarta Composite Index. It tracks the overall performance of all stocks listed on the Indonesia Stock Exchange (IDX), similar to how the S&P 500 tracks the US market.
Ticker	A short code (usually 4 letters) that uniquely identifies a stock on the exchange. Example: BBCA = Bank Central Asia.
HAKA	Hajar Kanan ("hit the seller's asking price").
HAKI	Hajar Kiri ("hit the buyer's bid price").

3. Dashboard Sections

3.1 Overview Tab

The Overview tab is the landing page. It provides a snapshot of the market at a glance. It contains the following panels:

Market Summary Row

Six cards at the top showing: Total Trading Value, number of Advancing stocks (price went up), Declining stocks (price went down), ARA/ARB counts (stocks that hit their daily price limits), Foreign Net flow (whether international investors are buying or selling overall), and Total Volume traded.

IHSG / JCI Index Panel

Shows the current value of the Jakarta Composite Index, its point change and percentage change for the day, a market breadth bar (visual ratio of advancing vs declining stocks), and a sector heatmap showing which industry sectors are performing best or worst.

Top Movers Panel

Lists the 15 stocks with the biggest price gains (Gainers) or losses (Losers) for the day. You can toggle between the two views. Each row shows the ticker code, company name, current price, percentage change, and volume.

Money Flow Panel

Displays the aggregate foreign net flow (total buying minus selling by international investors) and an average "Bandar Score" across all stocks. Below that, a table lists the top 10 stocks ranked by foreign net buying activity.

ARA / ARB Monitor

Lists stocks that have hit their upper (ARA) or lower (ARB) daily price limits. Hitting ARA means the stock rose so much that trading is capped for the day; ARB means it fell to its daily floor.

Latest News Feed

A scrolling list of the 12 most recent news items, showing the source, category, time, headline, and related stock tickers.

3.2 Rankings Tab

The Rankings tab shows the best and worst 20 stocks across five timeframes: Daily, Weekly, Monthly, Quarterly, and Yearly. Click a timeframe tab to switch views.

For Daily, stocks are ranked by a composite "Day Trade Score" that combines HAKA pressure, bandar activity, foreign flow, volume ratio, and momentum indicators. For Yearly, stocks are ranked by an "Investment Score" that weights fundamentals like PER, PBV, ROE, dividend yield, and long-term performance.

Each table shows rank number, ticker, company name, price, daily change percentage, the relevant score or change metric, volume, and foreign net flow.

3.3 Screener Tab

The Screener is a full table of all 60 tracked stocks with official IDX market data. You can filter by sector and sort by any column. The columns displayed are:

Column	Description
Ticker	The stock's 4-letter code on the IDX.
Name	Full company name.
Open	The price at which the stock first traded when the market opens.
High	The highest price reached during the trading day.
Low	The lowest price reached during the trading day.
Close	The price at which the stock last traded when the market closes.

3.4 News Tab

Displays market news articles organized by timeframe: All, Daily, Weekly, Monthly, Quarterly, and Yearly. Each news card includes:

- Source: The publication or outlet (e.g., CNBC Indonesia, Kontan, Bloomberg Technoz).
- Category: The type of news (Market Mover, Corporate Action, M&A, Regulation, etc.).
- Sentiment: Bullish (positive outlook), Bearish (negative outlook), or Neutral.
- Impact: High, Medium, or Low, indicating how much the news could affect stock prices.
- Related Tickers: Which stocks are most relevant to this story. Clicking a ticker opens its detail view.
- Summary: A brief paragraph explaining the significance of the news.

3.5 Koneksi & Kultur Intelligence

This section provides uniquely Indonesian market intelligence that traditional financial screeners do not cover. It is divided into five sub-tabs:

Political Risk Radar

Tracks government regulations, policy changes, and tender awards that could move stock prices. It contains three panels:

- Regulatory Impact Radar: Lists upcoming or active government policies (e.g., mineral export bans, EV incentives, carbon taxes) with their probability of implementation, affected sectors, and direction of impact.
- Government Tender Monitor: Tracks large government contracts and infrastructure projects, showing estimated value, awarding ministry, likely winning companies, and an anomaly detection score that flags potentially unusual award patterns.
- Political Connection Heatmap: Maps each stock's level of government connection using a tier system (Tier 1 = closest ties, Tier 3 = minimal ties), number of government contracts, and conglomerate affiliation.

Social Sentiment

Monitors what everyday Indonesians are saying about stocks on social media and in communities:

- Influencer Impact Tracker: Tracks mentions by popular financial influencers on TikTok, Instagram, YouTube, Twitter/X, and Telegram, with engagement numbers and viral scores.
- Warung Kopi Chatter: Aggregates retail investor sentiment from forums and chat groups, showing mention counts, sentiment scores, and trending direction for each stock.
- Conglomerate Drama Tracker: Monitors news and social media for events involving Indonesia's major business families (board changes, disputes, new ventures).
- Gojek/Grab Driver Sentiment: Uses ride-hailing demand as a proxy for consumer spending confidence, broken down by category (food delivery, rides, groceries, payments).

Cultural Catalysts

Identifies seasonal and cultural events specific to Indonesia that historically affect stock prices:

- **Seasonal Events:** Tracks Ramadan/Lebaran spending surge, Back to School, Year-End Window Dressing, Chinese New Year, Independence Day rally, and Dividend Season. Shows historical average returns and beneficiary stocks.
- **Viral/Meme Stock Alerts:** Flags stocks that are trending virally on social platforms, with risk warnings for potential pump-and-dump schemes.
- **Regional Pride Investing:** Maps investment patterns by Indonesian region (e.g., East Java favors tobacco stocks, Kalimantan favors mining stocks).
- **Campus Hype Tracker:** Shows which stocks are most popular among students at Indonesia's top universities.

Conglomerates

A detailed map of Indonesia's 10 most influential business families, including: family name, patriarch, estimated net worth, political connection tier, listed companies they control, succession risk rating, and heir readiness percentage. This matters because in Indonesia, business families often have outsized influence on stock performance.

Wealth Transfer

Examines how different generations of Indonesian investors approach the market:

- **Generational Stock Preferences:** Compares "Boomer Favorites" (e.g., BBCA, TLKM) with "Millennial/Gen-Z Picks" (e.g., GOTO, BUKA).
- **Family Office Indicators:** Tracks the formation of family investment offices, their average assets under management, and where they allocate capital.
- **Succession Risk Scorecard:** Ranks conglomerate families by how prepared they are for leadership transition, which can affect stock stability.
- **Digital vs Traditional:** Breaks down platform preference by generation (e.g., 95% of Gen-Z use digital trading apps vs 15% of Baby Boomers).

3.6 Supply Chain Tab

Provides intelligence on physical supply chains that affect Indonesian commodity stocks:

- **Commodity Price Dashboard:** Shows real-time-style prices for CPO (palm oil), Nickel, Coal, Gold, Copper, Tin, Rubber, and Natural Gas, with daily/weekly changes, supply trends, and which stocks are most affected.
- **Port & Logistics Status:** Monitors Indonesia's major ports (Tanjung Priok, Tanjung Perak, Belawan, etc.) for utilization rates, congestion levels, average wait times, and throughput changes.
- **Weather Impact Forecast:** Alerts on monsoon seasons, El Nino/La Nina, dry seasons, and volcanic activity that could disrupt supply chains and affect commodity-linked stocks.
- **China Dependency Scores:** Rates each stock's exposure to China (export dependency, import dependency, investment exposure) since China is Indonesia's largest trading partner.
- **Inter-Island Economic Disparity:** Compares Java vs outer islands on GDP share, stock market representation, logistics infrastructure, and growth rates.

3.7 Informal Economy Tab

Indonesia's informal economy accounts for roughly 60% of total economic activity. This tab uses unconventional indicators:

- **Warung Index:** Tracks foot traffic and transaction sizes at street food stalls, mini shops, and wet markets. Rising activity implies consumer confidence; falling activity may signal economic stress. Includes an implied inflation reading.
- **Ojek Demand Heatmap:** Monitors motorcycle taxi (Gojek/Grab) demand across six major cities as a proxy for consumer spending. Higher demand generally correlates with economic optimism.
- **Pasar Tradisional Prices:** Tracks prices of staple goods (rice, cooking oil, eggs, chicken, chili, shallots, sugar, flour) at traditional markets. Price spikes here often signal inflation before official statistics catch up.
- **Remittance Flow Analysis:** Monitors money sent home by Indonesian workers abroad (from Saudi Arabia, Malaysia, Hong Kong, Taiwan, Singapore). This flow supports the Rupiah and consumer spending in rural areas.

4. Stock Detail Modal

Clicking any stock ticker anywhere in the dashboard opens a detailed popup (modal) with comprehensive data for that single stock. The modal is organized into the following sections:

Section	What It Shows		
	Price Display	Current price in Rupiah, point change, percentage change, and a n price chart showing price movement throughout the trading day.	
	OHLC	Open, High, Low, and Close prices for	
		Source Reference	A direct link date.
			Trading Da

5. Data Sources and References

The dashboard draws from the following data sources. Each API response and screener row includes a "source" field indicating where the data originated.

Source	Description
IDX Stock Summary	Official daily stock summary files published by the Indonesia S at idxdata3.co.id. Contains Open, High, Low, Close, Previous C Value, Bid, Ask for every listed stock. Updated each trading da close.
Reference URL	Each stock row in the screener l IDX data server (e.g., SS26031 independently.
Bootstrap Fallback	W m se S C

6. Glossary

Quick-reference alphabetical glossary of all metrics and abbreviations used in the dashboard.
